- Express

Training

Code Fellows: Advanced Software Development Certificate in Full Stack JavaScript

Projects

Roomlet.io

- Description: Roomlet is a website for renters to verify postings and for landlords to find and verify renters. It's aim is to tackle fraudulent postings and to help make the process safe and smooth for both renters and landlords.
- languages used: React, JavaScript, MongoDB (mongoose), Jest, HTML5, CSS
- libraries used: Auth0, Material UI.
- my contributions: back end routes and middleware, front end all components, the reducer and actions for the listings, and the tests for all reducers and actions.
- live site: http://roomlet.herokuapp.com/
- frontend repo: https://github.com/Roomlet/roomlet
- backend repo: https://github.com/Roomlet/roomlet-api

Nosey-Neighbor.club

- description: Nosey Neighbor is an app built for the neighborhood watch. This is a backend only project.
- languages used: MongoDB, JavaScript, Mocha
- API's: Google Maps API
- my contributions: Model, Routes, and Tests for the comments.
- repo: https://github.com/tjayrocket/nosey-neighbor

Dev-Panda

- description: Dev-panda is an app geared towards Software Developers in the Seattle area. It uses the API's from meetups and google maps to create one place where developers can go to find networking opportunities. Meetups can be difficult to navigate and give you mixed results when looking for a specific type of meetup. this app narrows it down to tech related meetups only. it is currently only available for use in Seattle. We are working on a solution that will reach more users.
- languages used: JavaScript, CSS, HTML5
- API's: Google Maps, Meetups
- my contributions: usage of the Meetups API, the app layout design, the functions to display the meetups and to hide and show the descriptions.
- repo: https://github.com/AlexisYan/dev-panda

Work Experience

Freelance Full Stack Developer

May 3rd, 2016 - current
MERN Stack | Full Stack Developer
